

Lab 08: Unit Testing

Pre-Lab Answers

November 01, 2020

1. The goal of unit testing is to write appropriate tests for each and everything of the code and be able to run through the whole test suite to show any issues.
2. CHECK will test the expression provide but will continue the execution if failed. REQUIRE will test the expression and abort if the test fail.
3. REQUIRE_THROWS_WITH(frobnicate(), bad_joke);
